This cloth—as you can guess by its name—filters and separate different particles which is mostly used in chemical, food, pharmaceutical, metallurgy, centrifuge, dust cleaning the working environment, steel factories, wood and glass industries

material
polypropylene

bag filter

Bag filter is a container made of polyester that catches the dust when gas flows through. Then the filter is shook at preset time to shake the dust off and pour it in the hopper beneath the filter. This would separate the dust from the gas. This kind of filter has a high efficiency in dust cleaning and can act up to 99.9% effective

The only bag filter producer in Iran

The best alternative for bagfilters with compressed cloth that can improve air cleaning and prolongs filter effectiveness from 3 to 6 months

FILTER BAG

sanat baft moein co

material
Woven and
compressed polyester

Bagfilters are known as one the most popular dust cleaners in industry. This filtering system is frequently used in cement factories, iron melting, iron melting furnace, glass making, food and pharmaceutical industries. This system shows great flexibility and compatibility in different industry parts. .And also can be reliable due to high efficiency

Jumbo bag

Length and width 90 - 110

Height 100 - 200

weight 1/5 - 3

Jumbo bags are some big bags that are made of strong and flexible material. Jumbo bags are cloth made of polypropylene that can be produced with laminated or not laminated cloth or even with an extra layer considering the customer needs

JUMBO BAG

sanat baft moein co

Jumbo bags are used in petrochemical, oil and gas, cement and chalk, porcelain, tiles and ceramic, iron and steel, sugar, pharmaceutical, chemical, grains, beans, farming, food supplies, minerals, rock .flour, granol and etc

material
polypropylene

volume
500 - 2000 kg

types
3

Q bag

Qbags are produced considering the feature of keeping their cupid shape with layered edges. These edges are made to let the material flow through the bags simply. Because of this cupid shape that Q bags have, they need less space for storage and also reduce the transportations costs compared to other kinds up to 30%

	90 - 120
Height	100 - 200
diameter of the charging valve	40 - 60
Height of the charging valve	40 - 60
diameter of the Discharge valve	45 - 55
length of the Discharge valve	45 - 55
Dimensions after filling	90 - 120

Q BAG

material
polypropylene

volume
1000 - 2000 kg

types
2

Q bags save their cupid shape even after they are filled and their layered edges prevent the bags from inflating and therefore these Q bags are much easier to transport and store and decrease transportation costs up to 30%. Q bags are the best choice in petrochemical, flour material and exporting

Bitumen bag

bitubags are used to carry materials that have high melting point like bitumen. Bitubags are produced using polypropylene on the outside and a bitumen plastic layer on the inside. Bitumen plastic is actually a kind of plastic that has a melting point less than 200 degrees celsius and 120 degrees storing temperature and the melting temperature can vary depending on .storing conditions

90 - 110

100 - 200

1/5 - 3

BITUMEN BAG

sanat baft moein co

material
polypropylene

volume
1000 kg

types
2

Considering the loading conditions, these bags are produced in two kinds which can have pillars or not and therefore you don't need to waste any amount of energy to deplete them and can be put into the container while still in the bag which
